

Family Digital Safety Checklist

A practical guide from a 21-year enterprise security veteran

Use this checklist to audit your family's digital safety in one sitting. Check off each item as you complete it.
Items marked **PRIORITY** are highest risk — start there.

■ Section 1: Accounts & Passwords

Password Hygiene

- ☐ **All family members use a password manager**
Recommended: 1Password, Bitwarden (free). No more reused passwords.
- ☐ **Every account has a unique, strong password**
If any two accounts share a password, change them today. **PRIORITY**.
- ☐ **Critical accounts use two-factor authentication (2FA)**
Email, banking, Apple ID, Google Account — 2FA on all of these. **PRIORITY**.
- ☐ **Recovery email and phone number are current and accurate**
Outdated recovery info locks you out when you need access most.

Children's Accounts

- ☐ **Child's accounts are set up as supervised/family accounts**
Apple Family Sharing or Google Family Link — not independent adult accounts.
- ☐ **You know every account your child has**
Ask them to show you. No judgment — just awareness.
- ☐ **Child's passwords are stored securely (not on sticky notes)**
Keep in your password manager with a note explaining your access policy.

■ Section 2: Devices

All Family Devices

- ☐ **Every device has a screen lock (PIN, Face ID, or fingerprint)**
No PIN = no protection if the device is lost or stolen. **PRIORITY**.

**Automatic software updates are enabled**

Most breaches exploit known vulnerabilities patched months earlier.

**Find My Device is enabled on all phones and tablets**

Apple: Find My. Android: Find My Device. This recovers lost devices.

**Devices are encrypted**

iPhone: on by default. Android: Settings > Security > Encryption.

Children's Devices

**Screen time limits are configured**

Daily limits for apps, content categories, and downtime schedules.

**Content restrictions block age-inappropriate material**

Check: App Store ratings, Safari content restrictions, YouTube restrictions.

**Location sharing with parents is enabled**

Family Sharing location or Life360 — they should know you can see this.

**Device has no apps you haven't reviewed**

Scroll through every page. If you don't recognize it, ask about it.

■ ■ Section 3: App Permissions

Audit App Permissions on Every Device

**No apps have unnecessary location access**

Location should be "While Using" only — never "Always" — for most apps. PRIORITY.

**Camera and microphone access is limited to apps that need it**

Settings > Privacy — review which apps have camera/mic access.

**Contacts access is limited**

Many apps harvest your contact list. Revoke for apps that don't need it.

**No apps have access to all photos**

Give "Selected Photos" access, not "All Photos," unless essential.

**Background app refresh is disabled for non-essential apps**

This limits data collection when apps aren't in use.

Social Media Privacy Settings

**Instagram/TikTok/Snapchat accounts are set to Private**

Public = anyone can see your child's content. Check all platforms. PRIORITY.

**Facebook/Instagram: "Who can see your posts?" is set to Friends only**

- ☐ **Location tagging is disabled on all social posts**
Don't let photos reveal your home address or school location.
- ☐ **"Data used to improve ads" / personalization is opted out**
Every platform has this buried in settings. Worth 10 minutes to find it.

■ Section 4: Home Network

Router & Wi-Fi

- ☐ **Router admin password has been changed from the default**
Default passwords like "admin/admin" are public knowledge. PRIORITY.
- ☐ **Wi-Fi password is strong and not shared widely**
If your neighbor has your Wi-Fi password, rotate it.
- ☐ **Router firmware is up to date**
Log in to your router admin panel and check for firmware updates.
- ☐ **Guest network is set up for IoT devices and guests**
Keep smart TVs, thermostats, and guests off your main network.
- ☐ **WPA3 or WPA2 security is enabled (not WEP)**
Check your router settings — WEP is easily broken.

Smart Home Devices

- ☐ **Smart speakers (Alexa, Google Home) have a voice PIN for purchases**
Kids have accidentally ordered things. A PIN prevents this.
- ☐ **All smart devices use unique passwords**
Same password across all devices = one compromise = everything exposed.
- ☐ **Unused smart devices are unplugged or factory reset**
Old devices with old firmware are easy targets.

■ Section 5: Digital Footprint & Data Brokers

Know What's Out There

- ☐ **Google yourself and your children**
What comes up? What addresses, phone numbers, or photos are visible?
- ☐ **Check HaveIBeenPwned.com for your email addresses**
Free tool — see if your credentials appeared in any data breaches. PRIORITY.

**Submit opt-out requests to data broker sites**

Spokeo, Whitepages, BeenVerified, Intelius all sell your personal data.

**Review what Google knows about you at myactivity.google.com**

You can delete your activity history and adjust what's saved.

Children's Digital Footprint**Google your child's full name**

Any results shouldn't include address, school, or contact info.

**Review what their school shares online**

Honor roll lists, sports rosters, yearbook photos — all public.

**Old accounts (games, apps from years ago) are deleted or deactivated**

Dormant accounts with old data are vulnerabilities.

Your Safety Score	What It Means
30–34 items checked	Excellent — your family is well-protected
20–29 items checked	Good — a few gaps worth addressing soon
10–19 items checked	Fair — significant risks present. Prioritize PRIORITY items.
Under 10 checked	High risk — consider a professional assessment

Found gaps you're not sure how to fix?

KaNun Digital offers a comprehensive Family Privacy Sweep — we handle the technical work so you don't have to. Our founder has 21+ years of enterprise security experience, now focused on keeping families safe.
